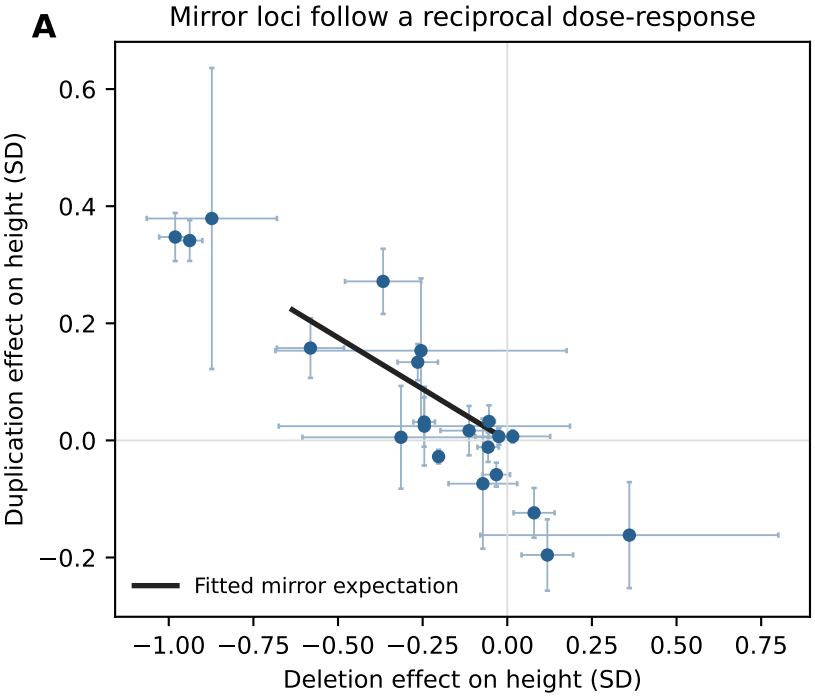
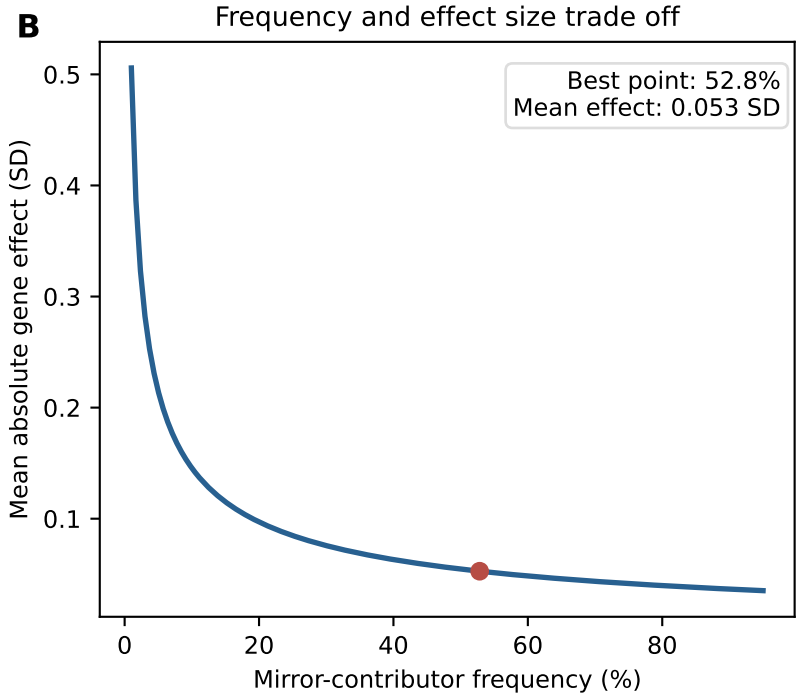
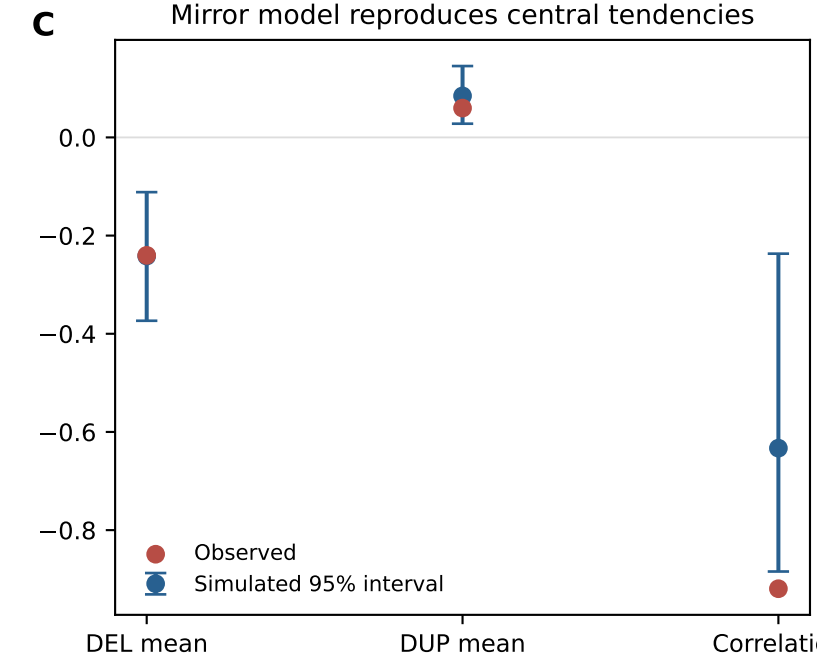
Height: mirror-gene model fitted to Sacks et al. mirror CNVs







D

Height mirror model

Kosmicki sign prior: 70% of deletion/LoF effects decrease height.

Fitted contributor frequency: 52.8%
Mean absolute contributor effect: 0.053 SD
Expected contributors in a 22-gene CNV: 11.6
Duplication/deletion magnitude ratio: 0.35

Interpretation: multiple modest effects partially cancel.
Duplication effects are substantially weaker than deletion effects.
