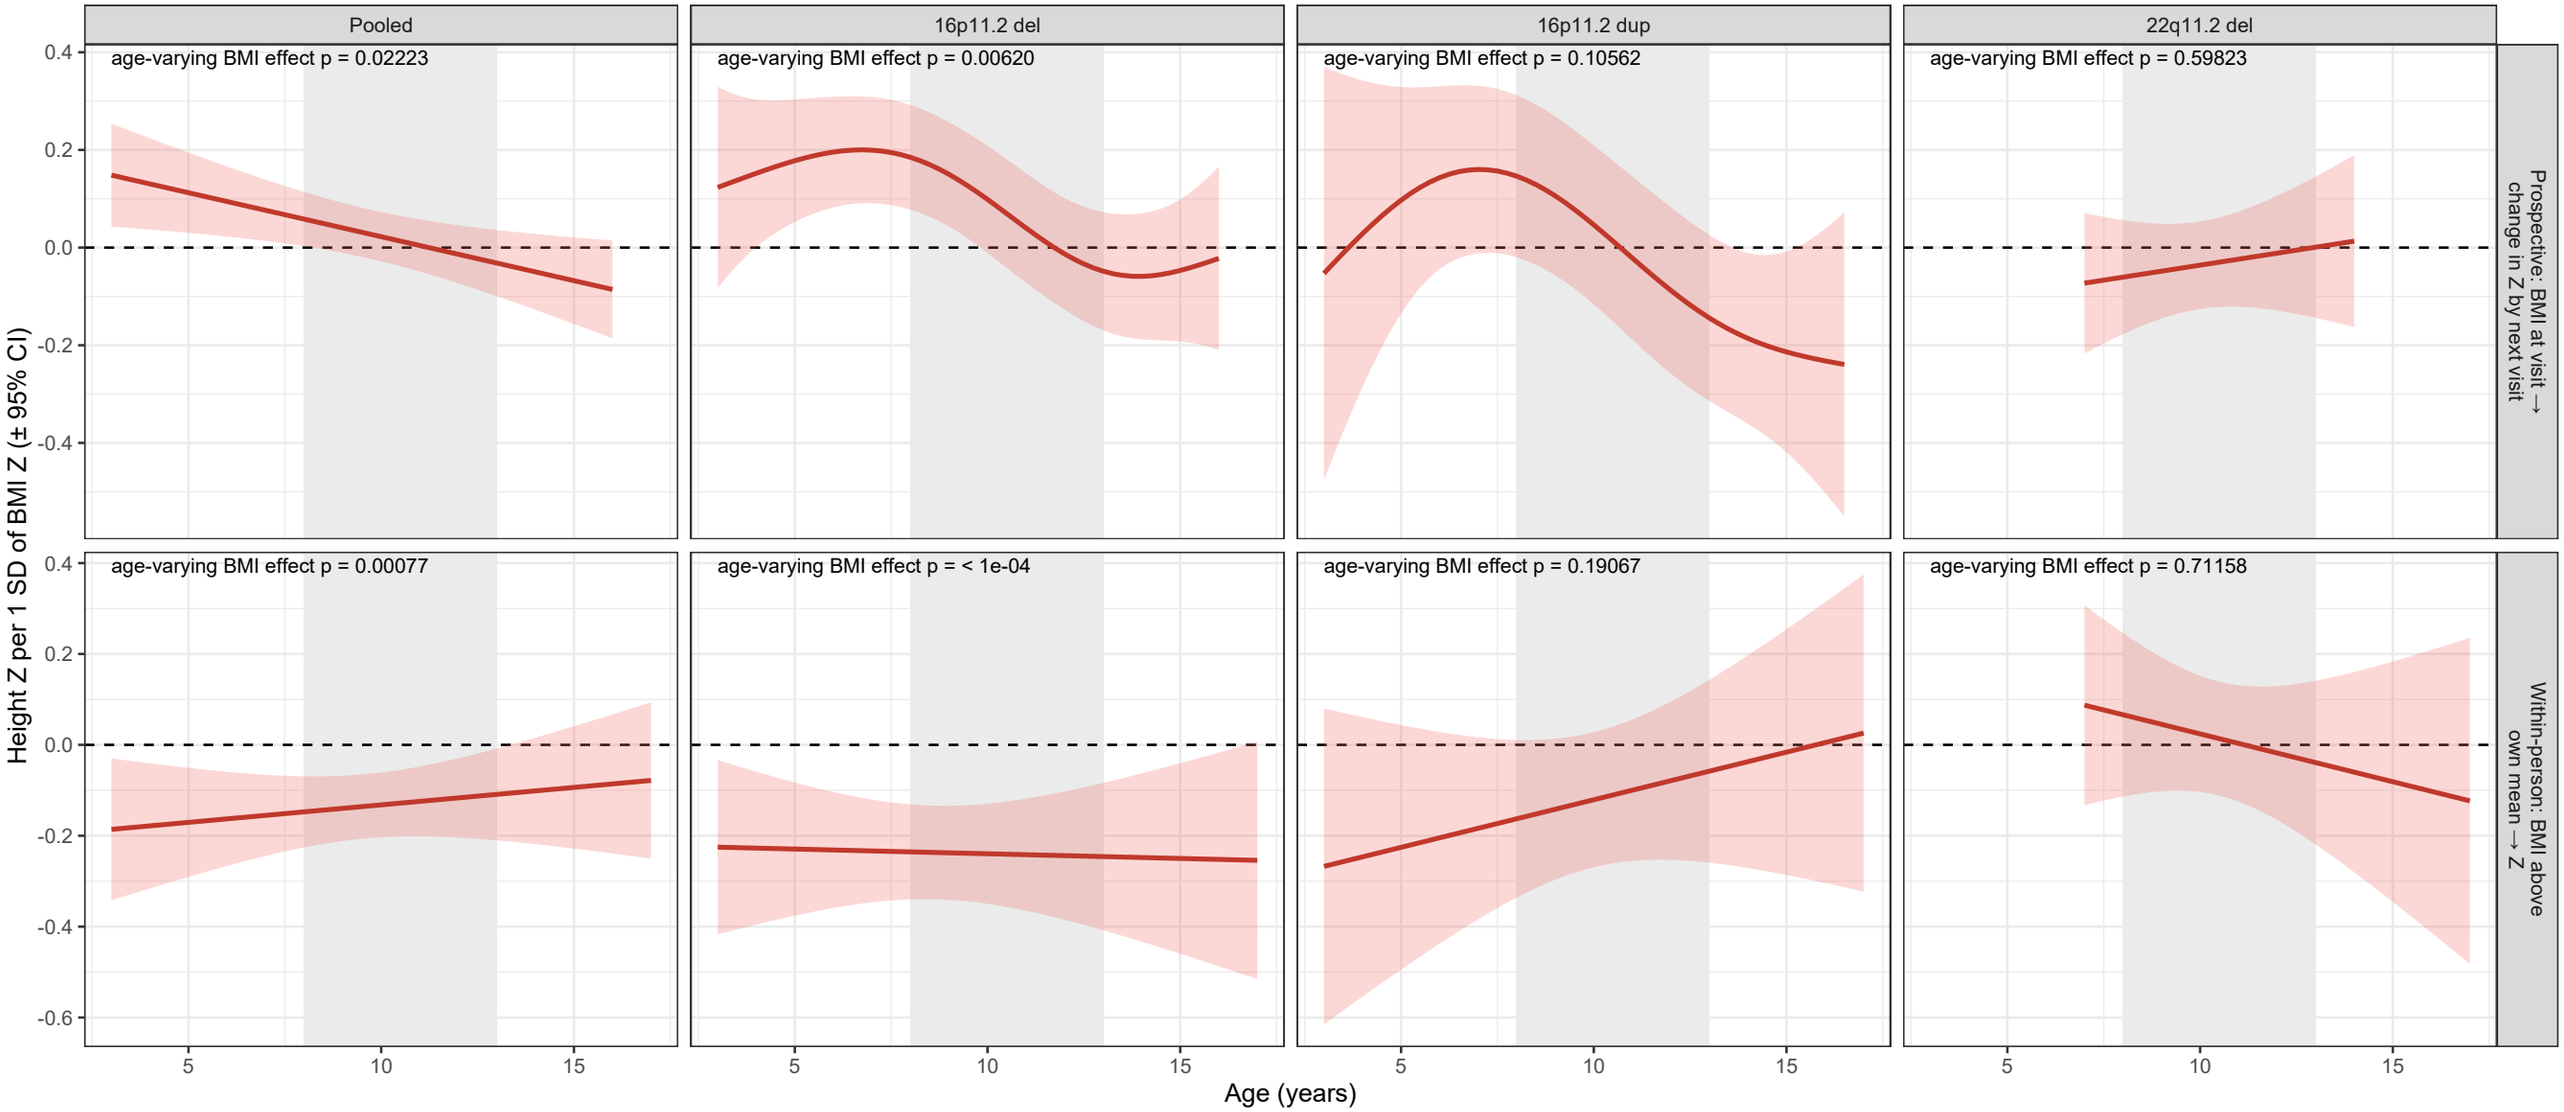
Age-varying effect of BMI on height in CNV carriers < 18 y (cleaned longitudinal visits; SVIP, Searchlight, Cardiff)

Top row (prospective): change in height Z to the next visit per 1 SD of BMI Z at a visit, by age at that visit.
Bottom row (within-person): difference in a child's height Z at visits where their BMI Z is 1 SD above their own average, by age.


Grey band = 8-13 y. Person random intercept; adjusted for sex-specific age curves, locus and cohort.
