16p11.2 BP4-BP5 deletion: from average height in childhood to short stature in adulthood
Clinical cohorts (G2MH, Cardiff, SVIP, SSC, Searchlight) by age period, overall and within BMI strata; adult biobanks from Sacks et al. (grey = cohort/ancestry with ≥ 10 carriers; black = r
All BMI, adolescent vs child: -0.46, p = 0.0022
All BMI, adult vs child: -0.64, p = 0.001
BMI ≥ 70th centile, adolescent vs child: -0.64, p = 0.00067
BMI ≥ 70th centile, adult vs child: -0.54, p = 0.059
BMI ≤ 30th centile, adolescent vs child: +0.05, p = 0.91
BMI ≤ 30th centile, adult vs child: -0.34, p = 0.47
16p11.2 deletion effect on height
(carriers – non-carriers, SD)
