Age-dependent BMI effects within each group: non-carrier controls vs CNV carriers

Height

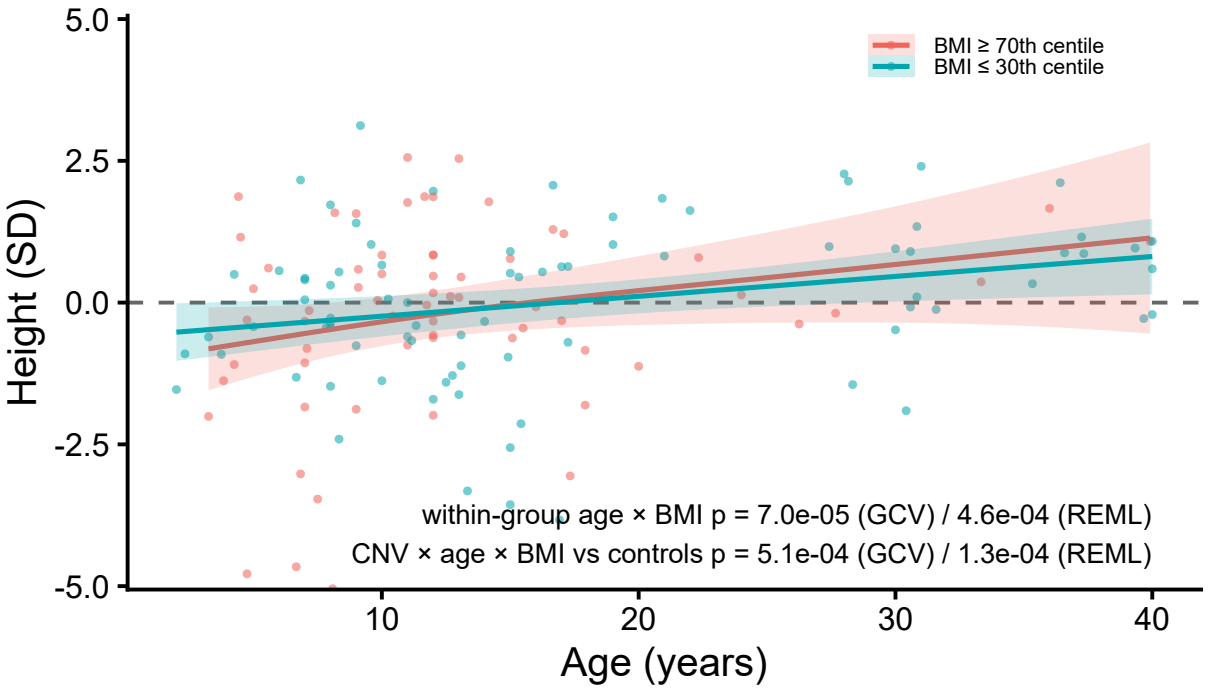

Non-carrier controls (SSC + SVIP) (n = 3124)

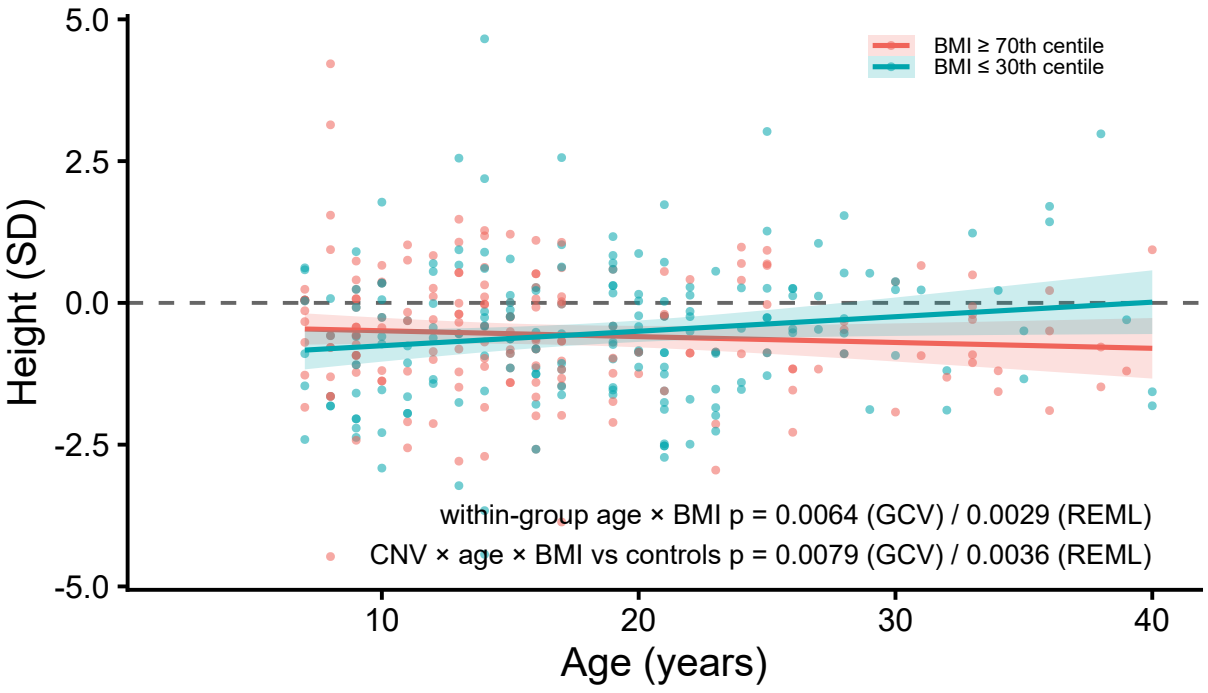

16p11.2 del (n = 374)

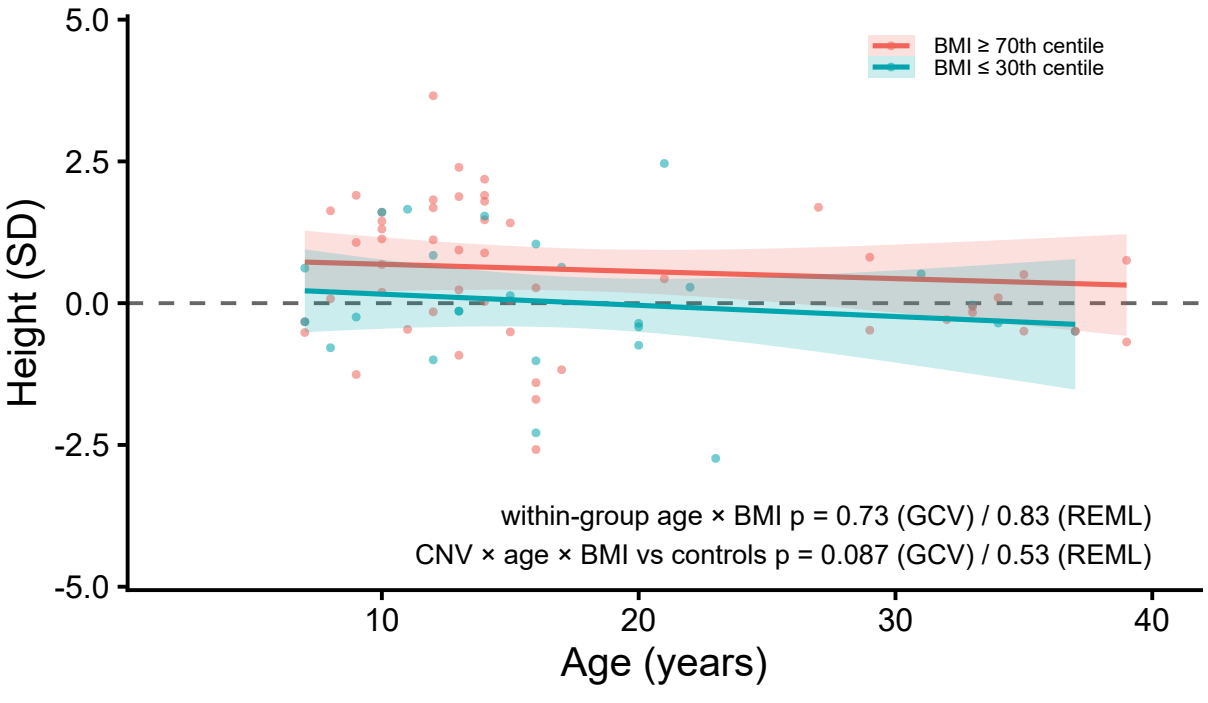

16p11.2 dup (n = 195)

22q11.2 del (n = 513)

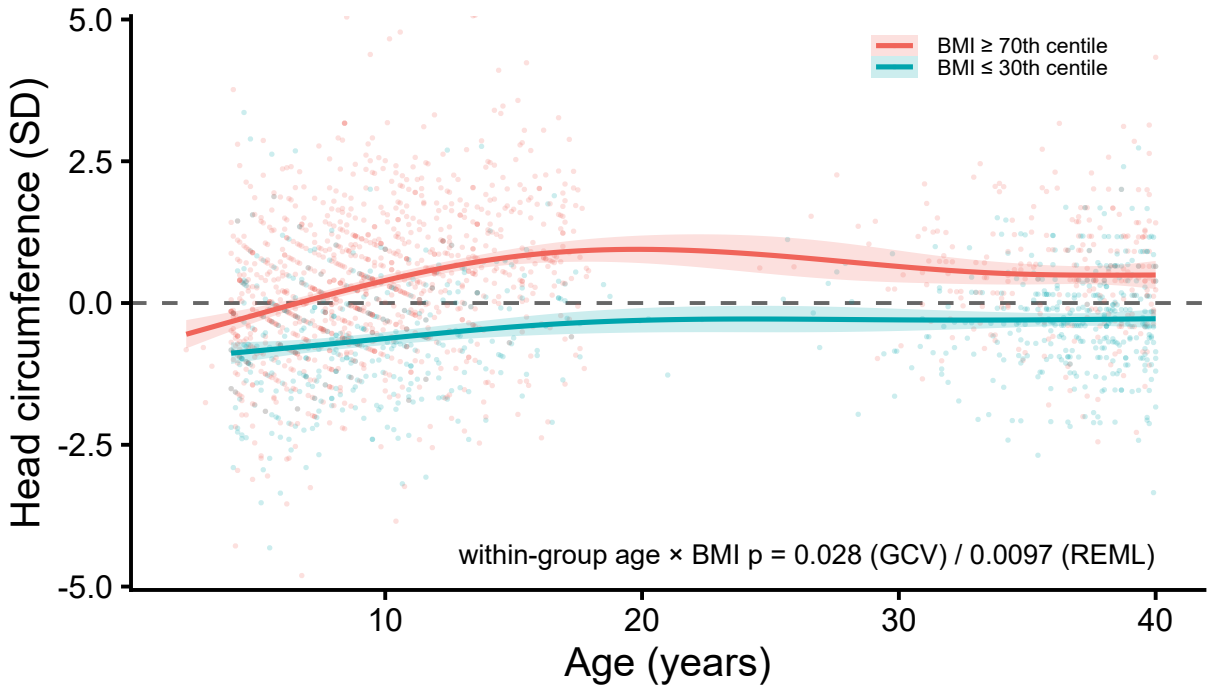

22q11.2 dup (n = 116)

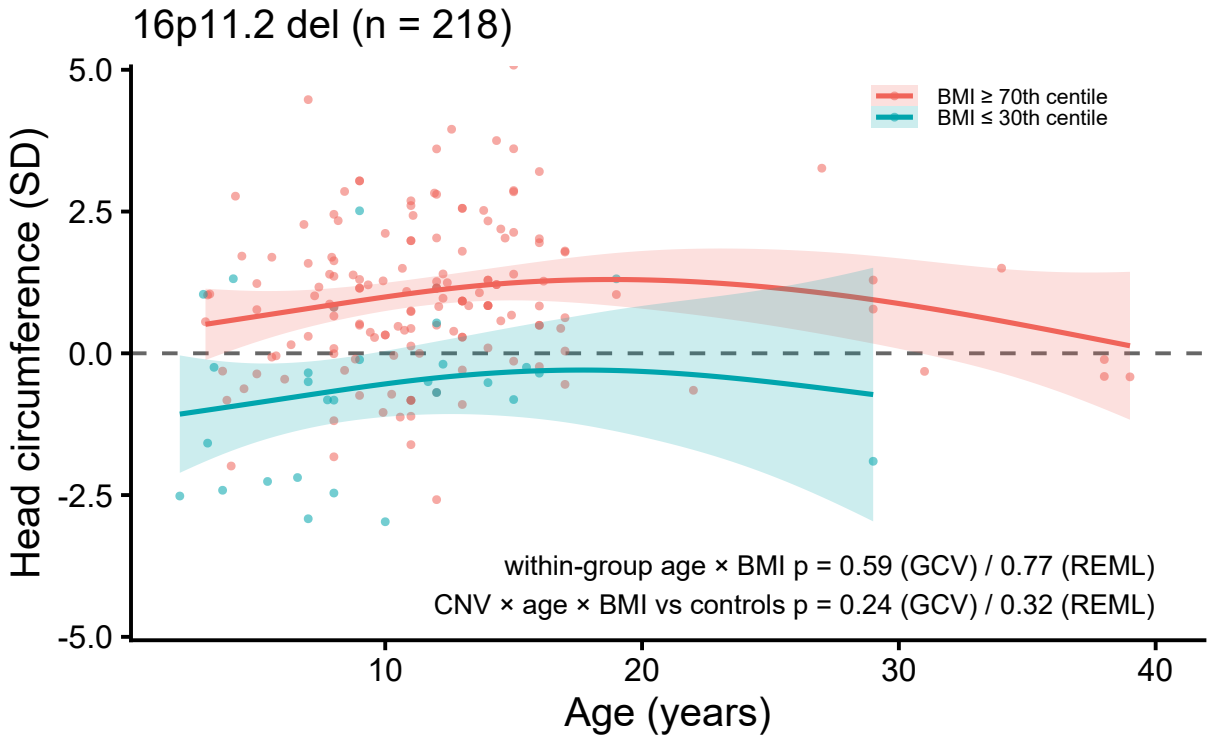

Head circumference

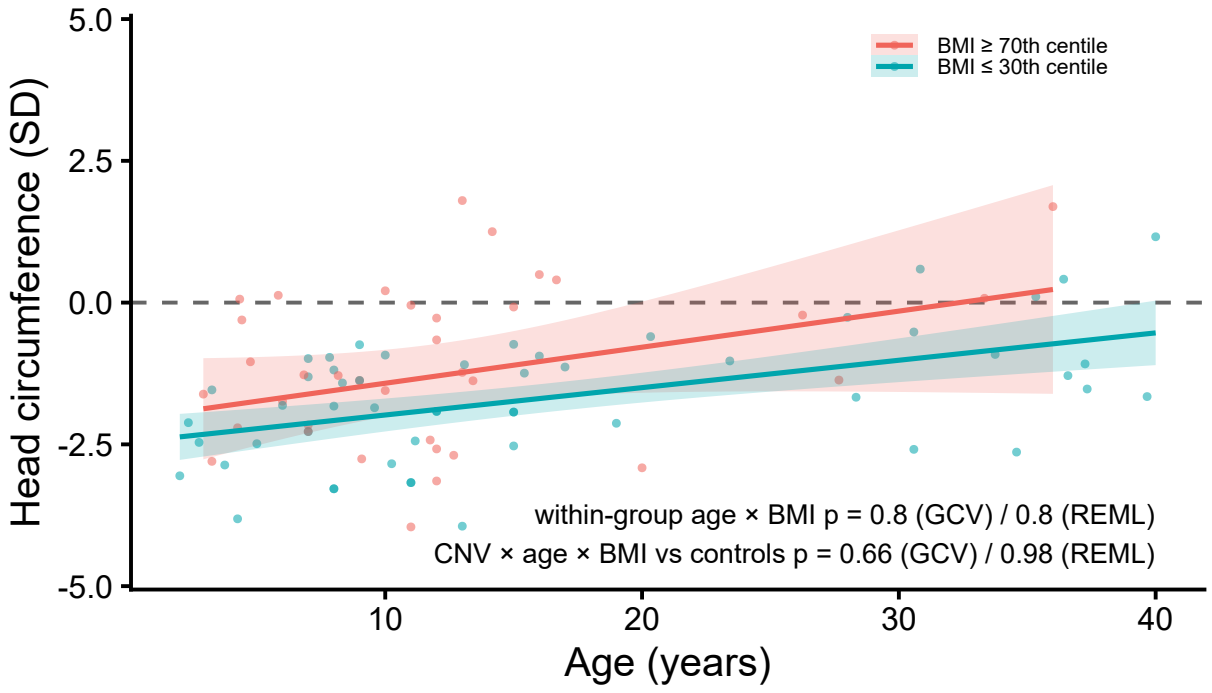

Non-carrier controls (SSC + SVIP) (n = 3103)

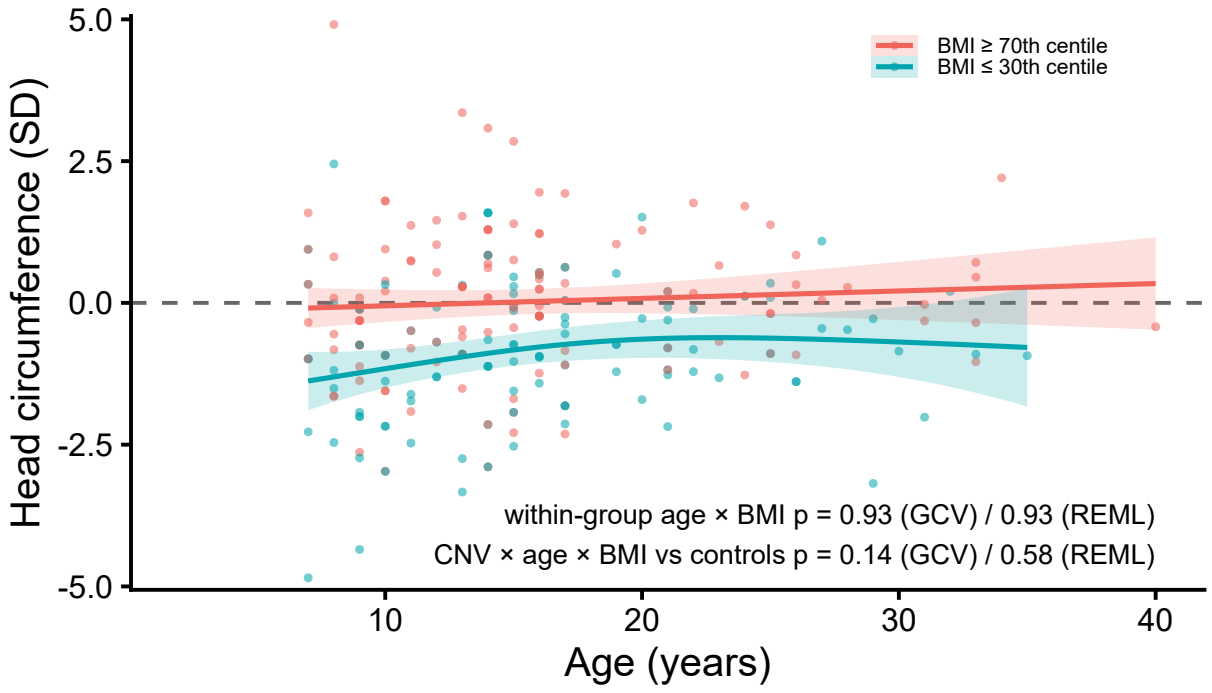

16p11.2 del (n = 218)

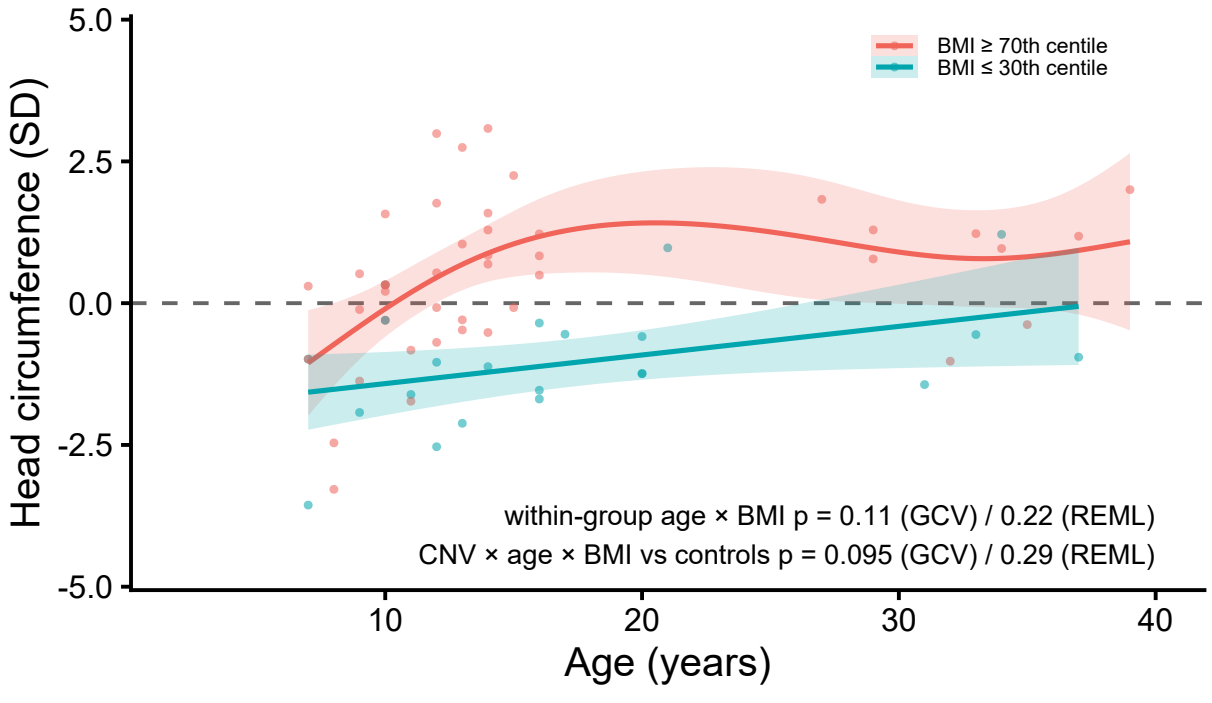

16p11.2 dup (n = 121)

22q11.2 del (n = 326)

22q11.2 dup (n = 93)

Within-group age × BMI: y ~ s(age) + s(BMI) + ti(age, BMI), continuous BMI, p of ti(age, BMI). CNV × age × BMI: carriers vs controls (Anjali's tensor-product test). GCV = mgcv default smoothing selection (Anjali); REML = restricted maximum likelihood. Curves: BMI ≥ 70th vs ≤ 30th centile. One record per person, ages 2-40.
