a
Common-variant predicted expression (TWAS) of the genes in each CNV predicts its dosage effect on height
All CNVs except Williams: ρ = 0.69, P = 0.0008
mirror ρ = 0.45; asymmetric ρ = 0.78 (without Williams)
separate lines for the two classes: P = 0.25
7q11.23 (Williams)
1q21.1
16p11.2 BP4–BP5
3q29
22q11.2 A–D
16p11.2 BP1–BP3
mirror
asymmetric
CNV dosage effect on height (SD)
(DUP − DEL) / 2
summed TWAS z of genes in the CNV
(common-variant predicted expression; + = higher expression, taller)
b
CNV genes vs random windows with equal gene count
asy vs mir: P = 0.45
P = 0.79
P = 0.21
summed TWAS z vs gene-count-matched null (SD)
mir
