
Genome-wide CNV burden predictions under mirror, continuous, and sparse single-hit models
A Observed height burden evidence
Observed burden pattern
DEL < 0 (Macé)
DUP < 0 (Auwerx direction)
Macé DEL
−0.41 cm/Mb
B Observed BMI burden evidence
Observed burden pattern
DEL > 0 (Macé)
DUP > 0 (Auwerx direction)
Macé DEL
+0.14 kg/m²/Mb
C Mirror
Predicts DUP burden in the wrong direction
D Continuous
Shifts DUP burden below zero
E Single hit
Also shifts DUP burden below zero
F Mirror
Predicts DUP burden in the wrong direction
G Continuous
Shifts DUP burden above zero
H Single hit
Also shifts DUP burden above zero
orange X = matched
Macé DEL calibration
DUP burden effect (native units per Mb)
DEL burden effect (native units per Mb)
