
Continuous versus single-hit asymmetry: simulated and observed height effects
A
Mirror + continuous
150 simulated datasets, with locus SE noise
ΔAIC 2.6, ΔLOO 1.2
simulated loci
B
Mirror + single hit
150 simulated datasets, with locus SE noise
ΔAIC 0.0, ΔLOO 0.5; P(hit | 23 genes) = 0.36
simulated, not hit
simulated, hit
C
Mirror + continuous: one typical dataset
33 loci, with locus SE noise
likelihood ratio 3.0 (model median 3.0; observed 9.9)
simulated loci
D
Mirror + single hit: one typical dataset
33 loci, with locus SE noise
likelihood ratio 10.2 (model median 10.2; observed 9.9)
simulated, not hit
simulated, hit
Duplication effect (SD)
Deletion effect (SD)
observed, mirror (21)
observed, asymmetric (12)
mirror line, ρ = 0.35
