
Continuous versus single-hit asymmetry: simulated and observed height effects
A
Mirror + continuous
150 simulated datasets, with locus SE noise
ΔAIC 2.6, ΔLOO 1.2
Duplication effect (SD)
Deletion effect (SD)
simulated loci
B
Mirror + single hit
150 simulated datasets, with locus SE noise
ΔAIC 0.0, ΔLOO 0.5; P(hit | 23 genes) = 0.36
simulated, not hit
simulated, hit
observed, mirror (21)
observed, asymmetric (12)
mirror line, ρ = 0.35
